- ✓ Connect to Single Stage Heating/Cooling System
- ✓ E-mail Alerts
- ✓ Data Logging
- ✓ XML Communications For Custom Interfacing
- ✓ No Software or Drivers to Install

Temperature Control From Anywhere

The X-300TM is a full-featured web-enabled thermostat. Users can adjust temperature settings for heating and cooling systems and view current indoor and outdoor temperatures from any web browser. The X-300TM provides an attractive thermostat control web page that works great on desktop computers as well as advanced telephones such as the iPhone[®] mobile digital device.

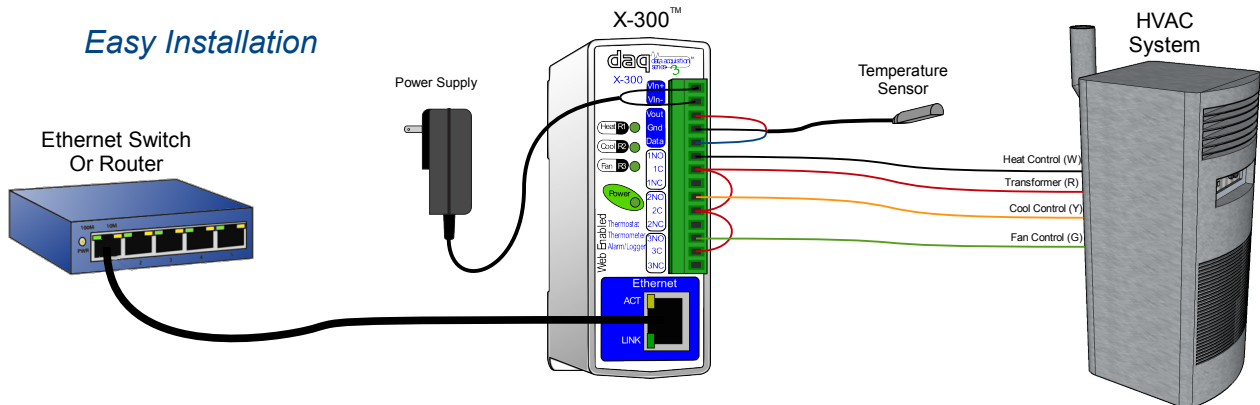

Intuitive Controls

Minimize Energy Costs

The easy-to-use interface allows users to schedule temperature changes throughout the day on a 1-week cycle. When schedules change, all settings can be instantly adjusted over the web. This can substantially reduce energy consumption. In addition, the built-in data logger stores temperature and HVAC operation data, which can be used in advanced energy analysis by the user.

Easy Installation
